

Quarterly Employee Access Review — Q3 2026

Fictitious compliance test document — Sentinel V5 sample data

Review Scope

This review covers production applications, finance systems, document repositories, and administrative infrastructure for the period July through September 2026.

Review Results

Managers confirmed 47 active employees. Forty-five access records were confirmed as appropriate. Two records require remediation because employees changed roles during the quarter.

Exceptions

One former contractor retained access to the document repository for three business days after contract termination. The account was subsequently disabled and the event was recorded in the security log.

Corrective Action

The IT administrator must implement an automated termination checklist and verify access removal within 24 hours. Evidence of completion must be retained with the quarterly review.
