

Vendor Security Assessment — CloudHarbor Analytics

Fictitious compliance test document — Sentinel V5 sample data

Vendor

CloudHarbor Analytics provides hosted reporting and analytics services to Northstar Community Services Ltd.

Assessment

The vendor supplied a current security questionnaire, penetration-test summary, business continuity statement, and data-processing terms.

Findings

The assessment identified one medium-risk issue: the vendor's documented incident-notification target is 72 hours, while Northstar's internal requirement is 48 hours.

Decision and Follow-up

The Procurement and Security teams accepted the vendor conditionally. Contract language must be reviewed to establish a 48-hour notification commitment before the next renewal.
