

Internal Compliance Audit Report — 2026

Fictitious compliance test document — Sentinel V5 sample data

Audit Objective

The audit evaluated whether Northstar Community Services Ltd. maintains documented controls for access management, information security, privacy, vendor oversight, and business continuity.

Overall Observation

The audit found that most sampled controls were documented and operating. Evidence quality was inconsistent across departments.

Finding 1 — Access Evidence

Two sampled access reviews lacked explicit reviewer approval dates. Management must update the review template to require reviewer identity, approval date, and remediation status.

Finding 2 — Vendor Monitoring

One vendor's annual security review was completed 18 days after the scheduled date. Procurement must establish an escalation process for overdue vendor assessments.

Management Response

Management accepted both findings. Corrective actions are assigned to the IT Operations Manager and Procurement Manager, with target completion dates of 31 October 2026.
